

Glenburnie Wind Farm proposal

Newsletter – June 2025

Project update

In November 2023, RES submitted a Section 36 application for consent to the Scottish Ministers for the 19 wind turbine and energy storage proposal, Longcroft Wind Farm, located approximately 9km north of Lauder in the Scottish Borders.

RES has now submitted Additional Information to the Scottish Ministers, which includes a reduction in the size of the proposal from 19 wind turbines to 12 wind turbines.

To better reflect the location of the updated proposal, we have also changed the name of the project to **Glenburnie Wind Farm**.

Further information on the design changes and Additional Information can be found on the reverse of this newsletter.

A Power for Good

Generating clean, green electricity for the equivalent of approximately 97,000 homes¹ annually.

Reducing carbon emissions by over 6 million tonnes over the project's lifetime².

Providing a community benefit package worth over £19.8 million over the wind farm lifetime.

Potential to deliver an annual discount on the electricity bills of properties closest to the wind farm.

Predicted to deliver £9.7million inward investment into the Scottish Borders, during construction.

Viewing the Additional Information

Electronic copies of the Additional Information can be viewed at www.glenburnie-windfarm.co.uk or the Scottish Government Energy Consents Unit (ECU) planning portal at www.energyconsents.scot (reference ECU00004774).

In addition, hard copies of this documentation are available at the following locations for public viewing:

Lauder Library, Mid Row, Lauder TD2 6SX (Tuesday 2pm – 5pm; Thursday 5pm – 7pm and Saturday 10am – 12pm)

Oxton War Memorial Hall, Station Road, Oxton, TD2 6PL (24 hours - located in vestibule of the hall)

Any new representations on the application may be submitted by email to the Scottish Government via representations@gov.scot; or by post to the Scottish Government, Energy Consents Unit, 4th Floor, 5 Atlantic Quay, 150 Broomielaw, Glasgow, G2 8LU, identifying the proposal and specifying the grounds for representation.

Written or emailed representations should be dated, clearly stating the name (in block capitals) and full postal address of those making representations. Emailed representations should also include the full return email address of those making representations. Only representations sent by email to representations@gov.scot will receive acknowledgement.

All new representations should be received not later than 31st July 2025, although Ministers may consider representations received after this date.

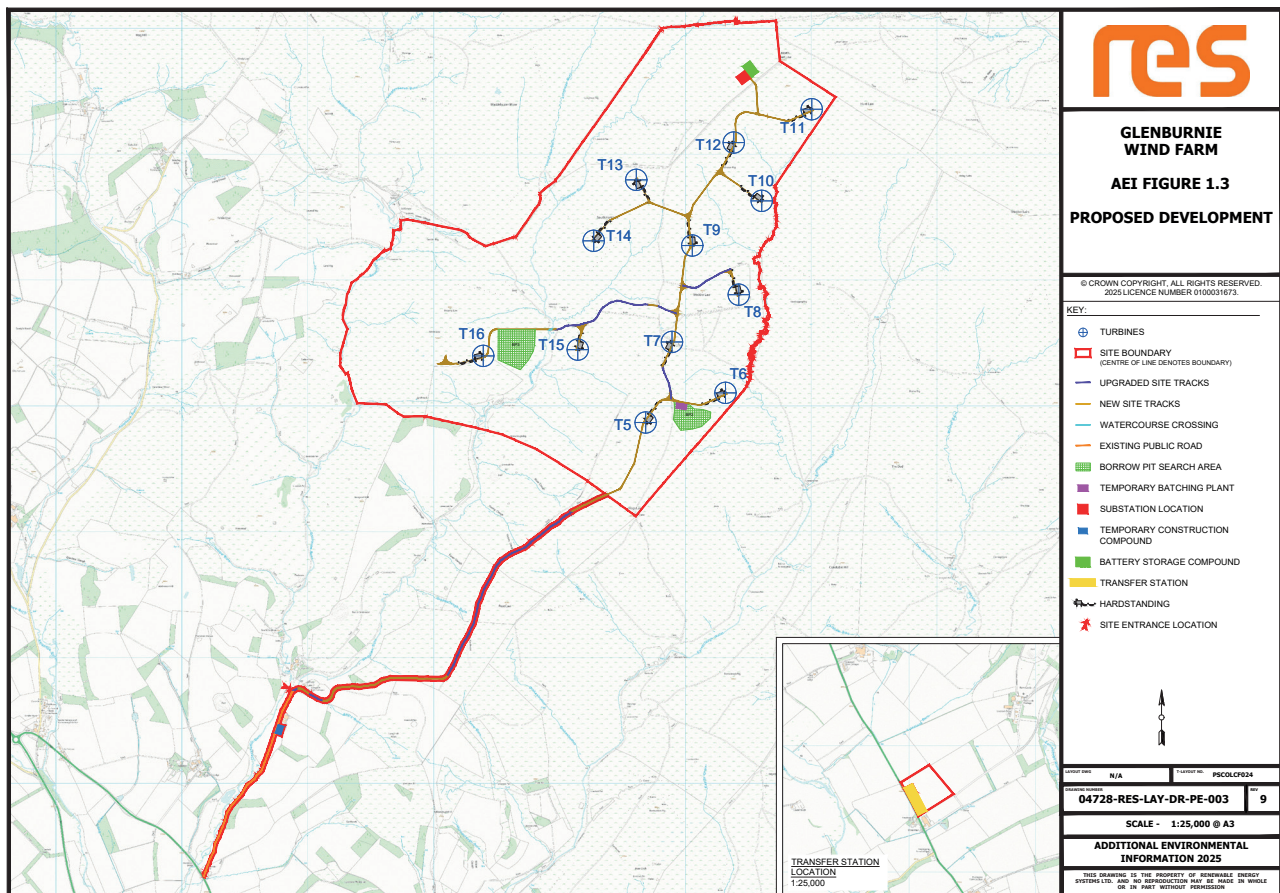

¹ Calculated using the most recent statistics from the Department of Energy Security and Net Zero (DESNZ) showing that mean domestic electricity consumption is 3,301kWh (as of December 2024).

² Calculated using the Carbon Assessment Tool spreadsheet (v2.14.1), issued by SEPA.

Updated proposal

The Additional Information and revised proposal for Glenburnie Wind Farm addresses comments raised by Historic Environment Scotland (HES) and reduces potential impact on the integrity of the setting of scheduled monuments within the site.

The revised proposal includes a reduction in the number of wind turbines from 19 to 12 and a reduction in the size of the site by 459 hectares. The location of the 12 wind turbines and proposed tip height of 220 m remains the same as the original proposal.

A larger version of the plan above can be found at glenburnie-windfarm.co.uk/planning-process

About us

RES, a British company, has a long history in Scotland where it has been operating since 1993 and has since developed and/or built 22 wind farms, with a total generating capacity of 660MW.

Employing more than 150 people in Scotland, it also exports its knowledge and skills in the renewables industry to 24 countries across the globe. With over 40 years of experience and over 4,500 employees worldwide, we bring together global experience, passion and innovation to transform the way energy is generated, stored and supplied.
